

2022 and Beyond

Charting the Future of HIV Prevention and Global Health Advocacy and Action

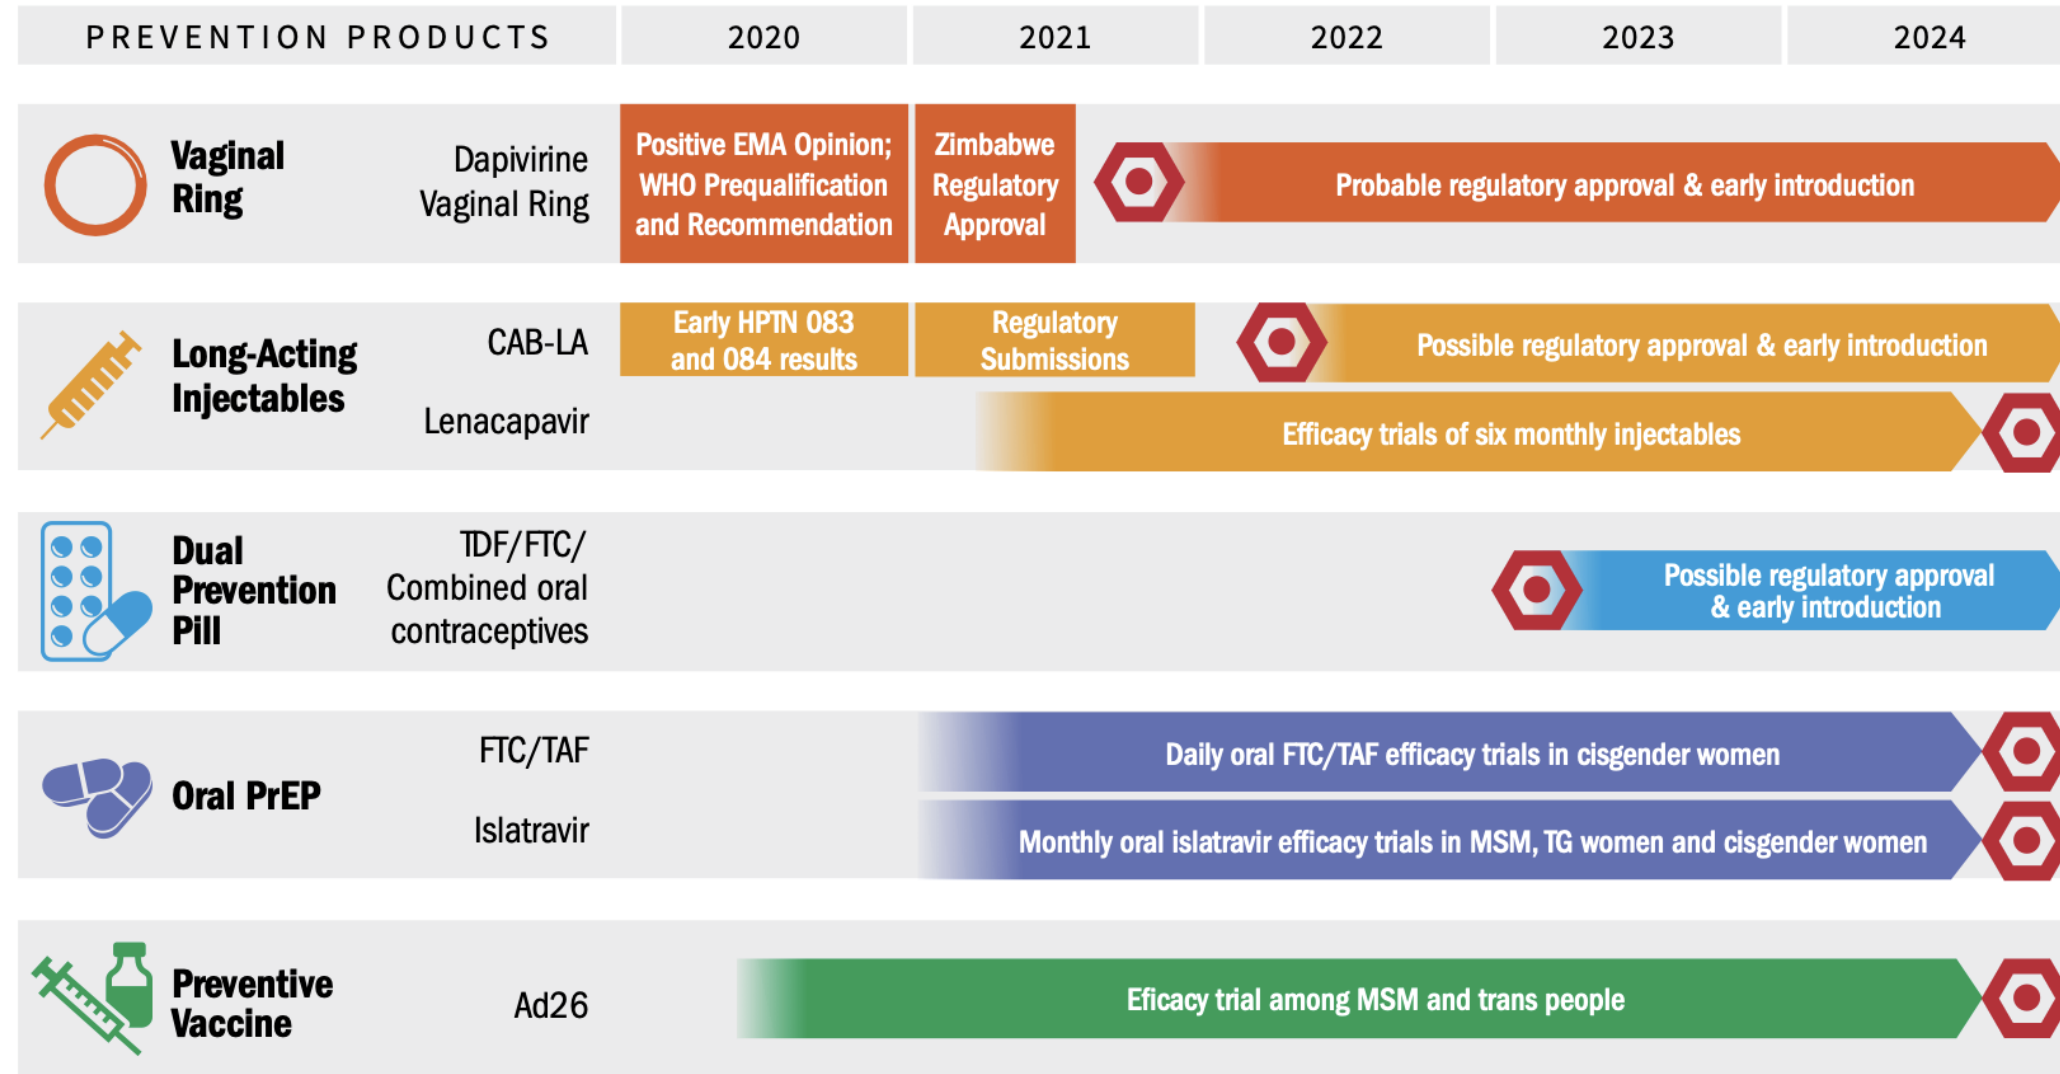

13 January 2022

The Future of HIV Px & Global Health Advocacy

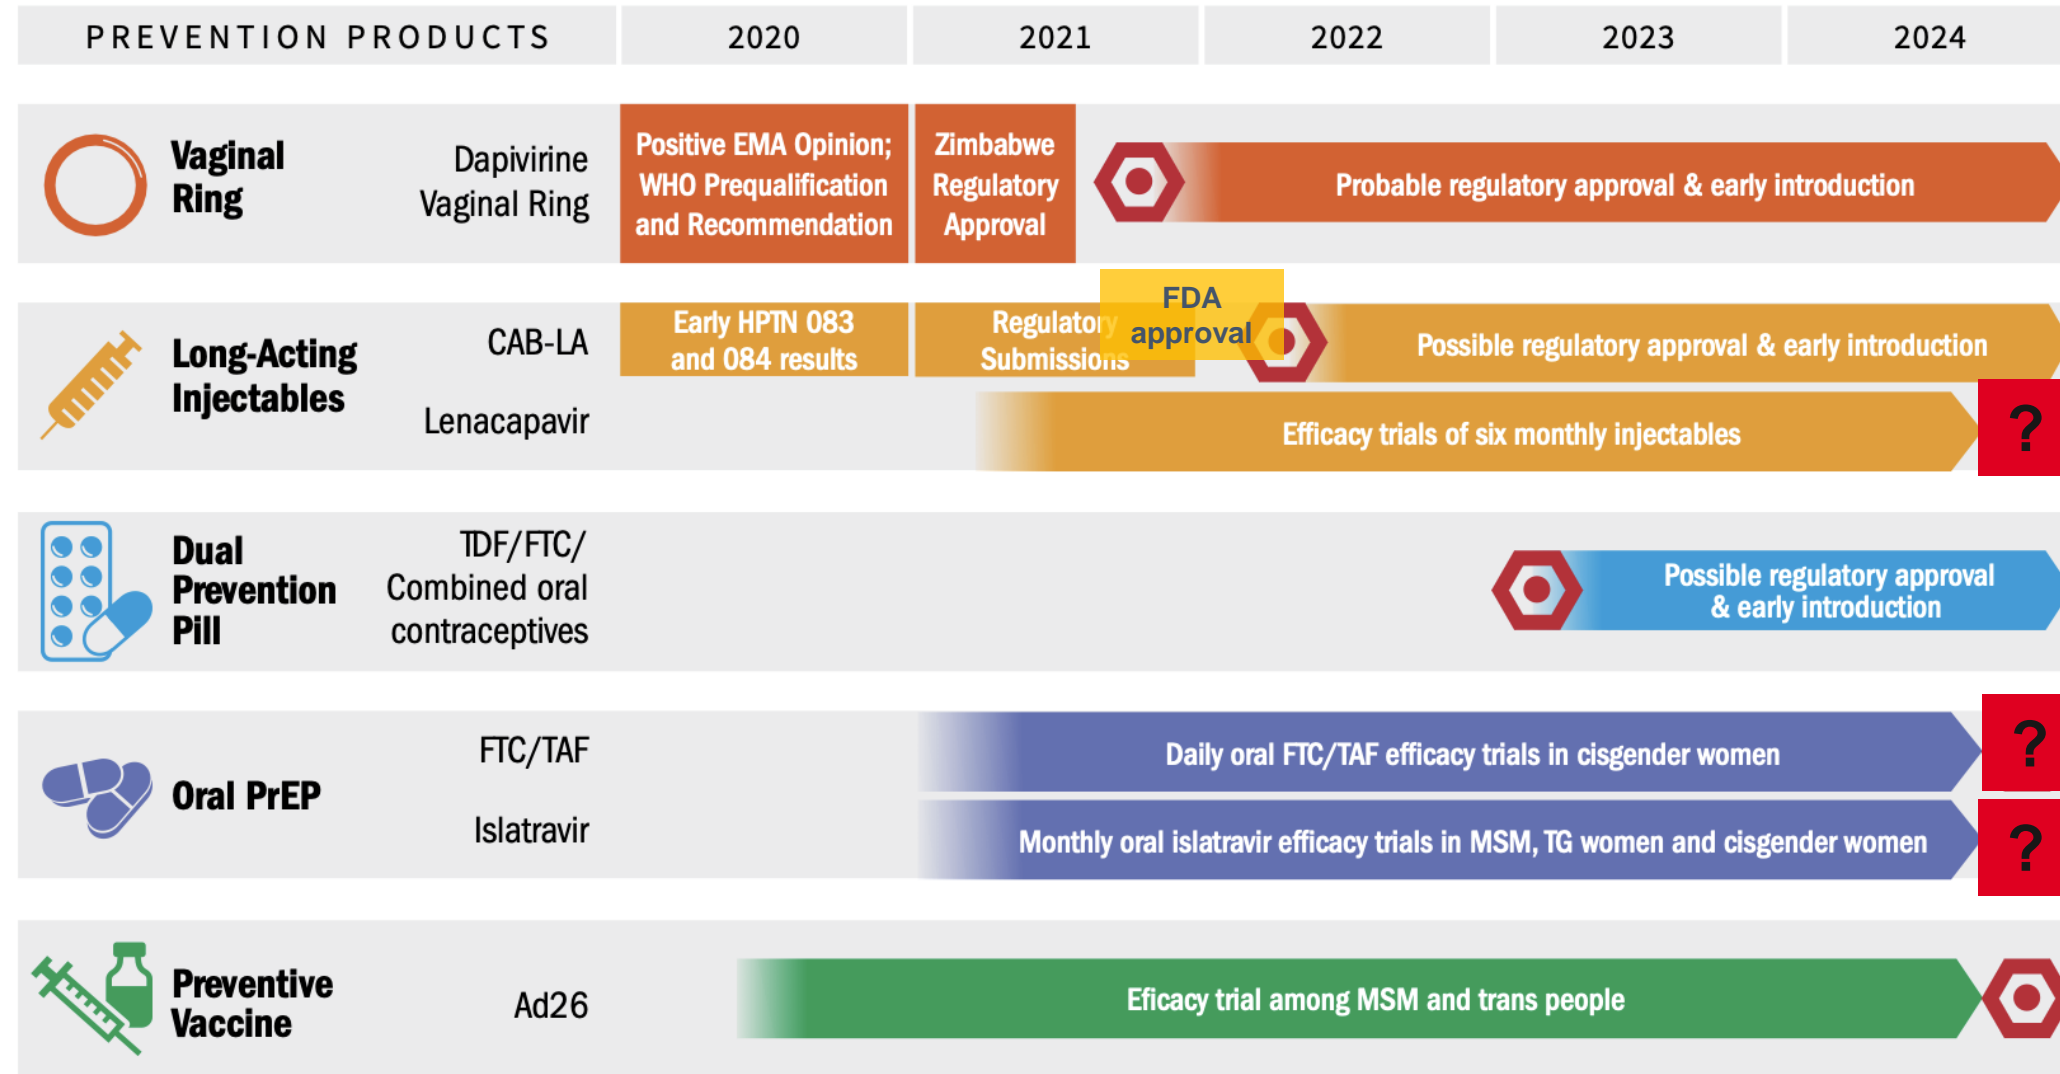

“ ... 2021 proved that even the world’s best science is no match for the debilitating effects of poor health systems, bad communication, vaccine nationalism and persistent health inequity. ”

Biomedical Prevention at World AIDS Day

So What in 2022

Develop Options; Deliver Choices

1. ***Deliver what we've got:*** Increase access to what we have now and plan for what's coming, and programming for choice
2. ***Develop what we need:*** Adapt research agendas to reflect lessons of past 18 months (from HIV results and from COVID)
3. ***Center communities in the response***
4. ***Improve the “prevention architecture”*** to drive better decision-making
5. ***Imbed the AIDS response into the future of global health security and pandemic preparedness***
