

What Can Advocates Do?

Advocate

Develop advocacy campaigns to raise awareness among policymakers, stakeholders, and the general public.

Engage

Actively engage and work closely with local communities to understand their specific needs, concerns, and barriers to vaccine access. Foster community participation by involving community leaders.

Support

Establish favorable conditions and long-term commitments for an R&D and manufacturing ecosystem by creating government-led financial support mechanisms, and encouraging innovative financing models and demand pooling.

Facilitate

Enable maturation of regulatory systems and harmonization, for faster approvals and increased access, and build capacity for R&D and vaccine production.

Adapt

Create a prioritization framework for selecting products based on LMIC and community need, and match production capacity with priority products and market needs.

Implement

Aim to ensure effective implementation by creating awareness, mobilizing stakeholders, ensuring community participation, and coordinating efforts to ensure trust in locally-made products.

Monitor

Use measurement frameworks to monitor stakeholder activities, and hold them accountable for keeping their commitments.
